Combined executive report: Webbprogrammering (PAGWG, HT27)

Prerequisite QA of 15 course occurrences by 2 independent agent runs: `claude-code claude-sonnet-5-5`, `codex gpt-5.4`.

1. Executive summary

Two independent runs (Claude Code with `claude-sonnet-5-5`, Codex with `gpt-5.4`) reviewed the 15 course occurrences of Webbprogrammering (120 hp) and agree on 14 verdicts. Both runs consider the program largely coherent, with one issue that needs action:

1. **DV1709 Driftsättning av webbtjänster på Linux server (VT29): GAP in both runs, high severity.** The plan assumes knowledge of Docker (and Git), but no earlier mandatory course teaches Docker, and Git appears only implicitly as "Versionshantering" in DV1707. The Claude run also notes that DV1709 lists Docker as its own content, so the plan contradicts itself. Either remove Docker from the assumed knowledge or teach it earlier.
2. **Prerequisite wording:** DV1705 and DV1706 require "webbprogrammering" (7.5 and 15 hp) without naming course codes. Both runs matched this to DV1704 (and DV1705) by content and recommend naming the codes. Both runs also raised a point on DV1707, but different ones (the Codex run the same generic wording, the Claude run that version control and CI are not introduced earlier).

To adjudicate: PA1438 Självständigt arbete (VT29). The Claude run says GAP (medium): the thesis outcomes assume scientific foundation, literature search and report writing, which no earlier course teaches. The Codex run says OK, since the 60 hp credit requirement is met (90 hp guaranteed) and the technical content is covered. Both agree on the credit requirement, so the question is whether a research-method element is missing. This is a candidate for a human decision. Agreement between two models is not proof; findings are candidates for human review.

Key figures (computed):

- 2 runs agree on the verdict for 14 of 15 courses (93%); 1 course has differing verdicts.
- 1 course is flagged (not OK) by every run: DV1709 VT29.
- 3 issues were reported by more than half of the runs (3 by all); 3 by a minority of runs only and need verification.
- High-severity issues with majority or consensus support: 1.

2. Priority issues (reported by a majority of runs)

Agents describe the same problem in different words, so issues are grouped by course and finding type. *Support* = number of runs reporting it. *Severity* is the highest any run gave.

ID	Severity	Support	Course	Semester	Type	What	Recommendation
C-001	high	2/2	DV1709	VT29	competence-gap	DV1709 'Förutsatta kunskaper' require knowledge of Docker (and Git), but no earlier mandatory course teaches Docker, and Git is only implicit in DV1707's 'Versionshantering'. DV1709 itself lists Docker/docker compose as course content, so the plan contradicts itself.	Either remove Docker from the assumed knowledge in DV1709 (since the course teaches it), or add Docker to an earlier course (e.g. DV1708 or DV1711); also name Git explicitly in DV1707 or an earlier course.
C-003	low	2/2	DV1705	HT27	ambiguous-requiremen	The prerequisite 'kurs i webbprogrammering, 7,5 hp' does not name a course; the matching course is DV1704	State the prerequisite as course code DV1704 (or its equivalent) in the plan.

ID	Severity	Support	Course	Semester	Type	What	Recommendation
					t	Webbteknologier.	
C-004	low	2/2	DV1706	VT28	ambiguous-requirement	The prerequisite ‘kurser i webbprogrammering, 15 hp’ names no course codes; it is satisfied by DV1704 + DV1705 by content only.	Name DV1704 and DV1705 explicitly in the prerequisite.

3. Disagreements to adjudicate

Courses where the runs reached different verdicts. A human (or a further run) should decide these; reasoning of each run is quoted.

#	Semester	Course	Type	claude-code claude-sonnet-5-5	codex gpt-5.4
14	VT29	PA1438 Självständigt arbete i Webbprogrammering	mandatory	GAP	OK

14. PA1438 Självständigt arbete i Webbprogrammering (VT29)

- **claude-code claude-sonnet-5-5**: GAP (medium). The credit requirement ‘60 hp avklarade på programmet Webbprogrammering’ is met (90 hp guaranteed). The technical content is well covered by DV1704-DV1711 and PA1493 (customer project, agile, requirements, reflection). But outcomes such as ‘kännedom om områdets vetenskapliga grund’, ‘söka, samla och kritiskt tolka relevant information’ and ‘dokumentera arbetet i form av en rapport’ build on a scientific/academic fou…
- **codex gpt-5.4**: OK (medium). The formal prerequisite is “60 hp avklarade på programmet Webbprogrammering”. Before VT29 period 3, the ledger guarantees 90 hp from earlier mandatory courses, so the credit threshold is met with margin. The course then asks the student to integrate and deepen earlier knowledge within web programming in an independent project and report. Earlier mandatory courses provide broad web-programming competence and project/…

4. Findings reported by a minority of runs

Not corroborated by a majority; treat as hypotheses. If another run flagged the same course under a different finding type, it is noted.

ID	Severity	Reported by	Course	Semester	Type	What	Other runs on this course
C-002	medium	claude-code claude-sonnet-5-5	PA1438	VT29	competence-gap	The thesis outcomes assume scientific foundation, literature search/critical source evaluation and report writing, but no mandatory course before PA1438 teaches research methodology or academic writing; only short reflections occur in DV1705 and PA1493.	-
C-005	low	claude-code claude-sonnet-5-5	DV1707	VT28	other	DV1707 lists ‘Versionshantering, kontinuerlig integration och driftsättning’ and group project methodology as content, but no earlier course in the program (HT27-VT28 period 3) introduces version control or CI; it is unclear whether the course teaches them or assumes them.	ambiguous-requirement
C-006	low	codex gpt-5.4	DV1707	VT28	ambiguous-	DV1707 uses the generic prerequisite wording “kurser i webbprogrammering, 15 hp” instead of naming the actual earlier courses	other

ID	Severity	Reported by	Course	Semester	Type	What	Other runs on this course
					requirement	that satisfy it in the program.	

5. Runs and agreement

Harness	Model	Date	OK	CONDITIONAL	GAP	UNCLEAR	Findings (high/medium/low)
claude-code	claude-sonnet-5-5	2026-10-21	13	0	2	0	1/1/3
codex	gpt-5.4	2026-10-21	14	0	1	0	1/0/3

Pairwise agreement. *Exact* = same verdict; *flag* = both say OK or both say not OK.

Run A	Run B	Courses	Exact verdict	Flag (OK vs not OK)
claude-code claude-sonnet-5-5	codex gpt-5.4	15	14 (93%)	14 (93%)

6. Course matrix

7. Method and limits

- Source: the validated per-run reports (`PAGWG-HT27__claude-code__claude-sonnet-5-5__2026-10-21.json`, `PAGWG-HT27__codex__gpt-5.4__2026-10-21.json`). Each run reviewed the same program independently; this report only compares them.
- Consensus verdict = the verdict given by more than half of the runs, otherwise SPLIT. Issues are matched by course and finding type, so one problem reported under two types counts as two minority issues; look at the “other runs” column before dismissing a minority finding.
- Agreement between runs is not correctness: models can share the same blind spot. Majority support raises confidence, it does not prove the finding. All verdicts are LLM judgments of course-plan text and flag candidates for human review.
- The narrative in section 1 was written by an agent from the figures in this report; everything else is computed.
